General

Type:
Fresnel Retarder

Physical & Mechanical Properties

Clear Aperture CA (mm):
18.81 x 18.81

Dimensional Tolerance (mm):
±0.10

	Bevel:
Protective as needed	
	Width (mm):
25.40	

Optical Properties

	Coating:
NIR II (750-1550nm)	
	Design Wavelength DWL (nm):
1064	
	Substrate:
N-BK7	
	Retardance:
λ/4	
	Surface Quality:
20-10	
	Wavelength Range (nm):
750 - 1550	
	Entrance and Exit Surface (mm):
25.4	

Regulatory Compliance

	RoHS 2015:
Compliant	
	Certificate of Conformance:
View	
	Reach 235:
Compliant	

Product Details

- Broadband Performance with <2% Retardance Variation
- 12.7mm and 25.4mm Options Available
- λ/4 Retardance

TECHSPEC® Fresnel Rhomb Retarders are available with design wavelengths of 532nm and 1064nm. By utilizing a specific angle, Fresnel rhomb retarders impart a retardance with each internal reflection of the light, totaling λ/4. Each design is paired with either VIS 0° or NIR II coatings to provide efficient transmission across a broad range of wavelengths. These TECHSPEC Fresnel Rhomb Retarders deliver less than 2% retardance variation across the specified wavelength range and are optimized for use in diode and fiber applications.

Custom

Edmund Optics offers comprehensive custom manufacturing services for optical and imaging components tailored to your specific application requirements. Whether in the prototyping phase or preparing for full-scale production, we provide flexible solutions to meet your needs. Our experienced engineers are here to assist—from concept to completion.

Our capabilities include:

- Custom dimensions, materials, coatings, and more
- High-precision surface quality and flatness
- Tight tolerances and complex geometries
- Scalable production—from prototype to volume
